

GETTING THE MOST FROM IT SUPPLIERS

Given the constant game of leapfrog played by IT suppliers, today's 'best' solution (however you judge that) is unlikely to remain in front for that long. It's therefore important when making IT investment decisions to look beyond immediate product or service attributes and consider the overall experience on offer from a supplier. But what does this translate to in practice? We asked 100 CIOs from

around the world to tell us about their frustrations, needs and wants.

If you've ever felt that IT suppliers too often over-sell and under-deliver, or prioritise their own interests ahead of yours, then you are not alone.

THE STUFF THAT CAN DRIVE YOU CRAZY

When we put some of the complaints we hear about anecdotally to the CIOs taking part in our study, the stats that emerged confirmed the level of frustration that exists. It also became clear that even the most tolerant of IT leaders frequently have their patience stretched, and this can have significant consequences for the suppliers concerned. **COMMON FRUSTRATIONS**
